# TOP Interior Doors

---

A combination of an aesthetic style and high quality is the secret to the TOP interior doors. Manufacturing technology that combines high-end finish with uncompromising quality. All TOP doors are manufactured with a 7 cm water-protected polymer at the bottom of the door, Flexboard filling for acoustic insulation, magnetic lock for silent locking and peripheral seal for noise reduction.

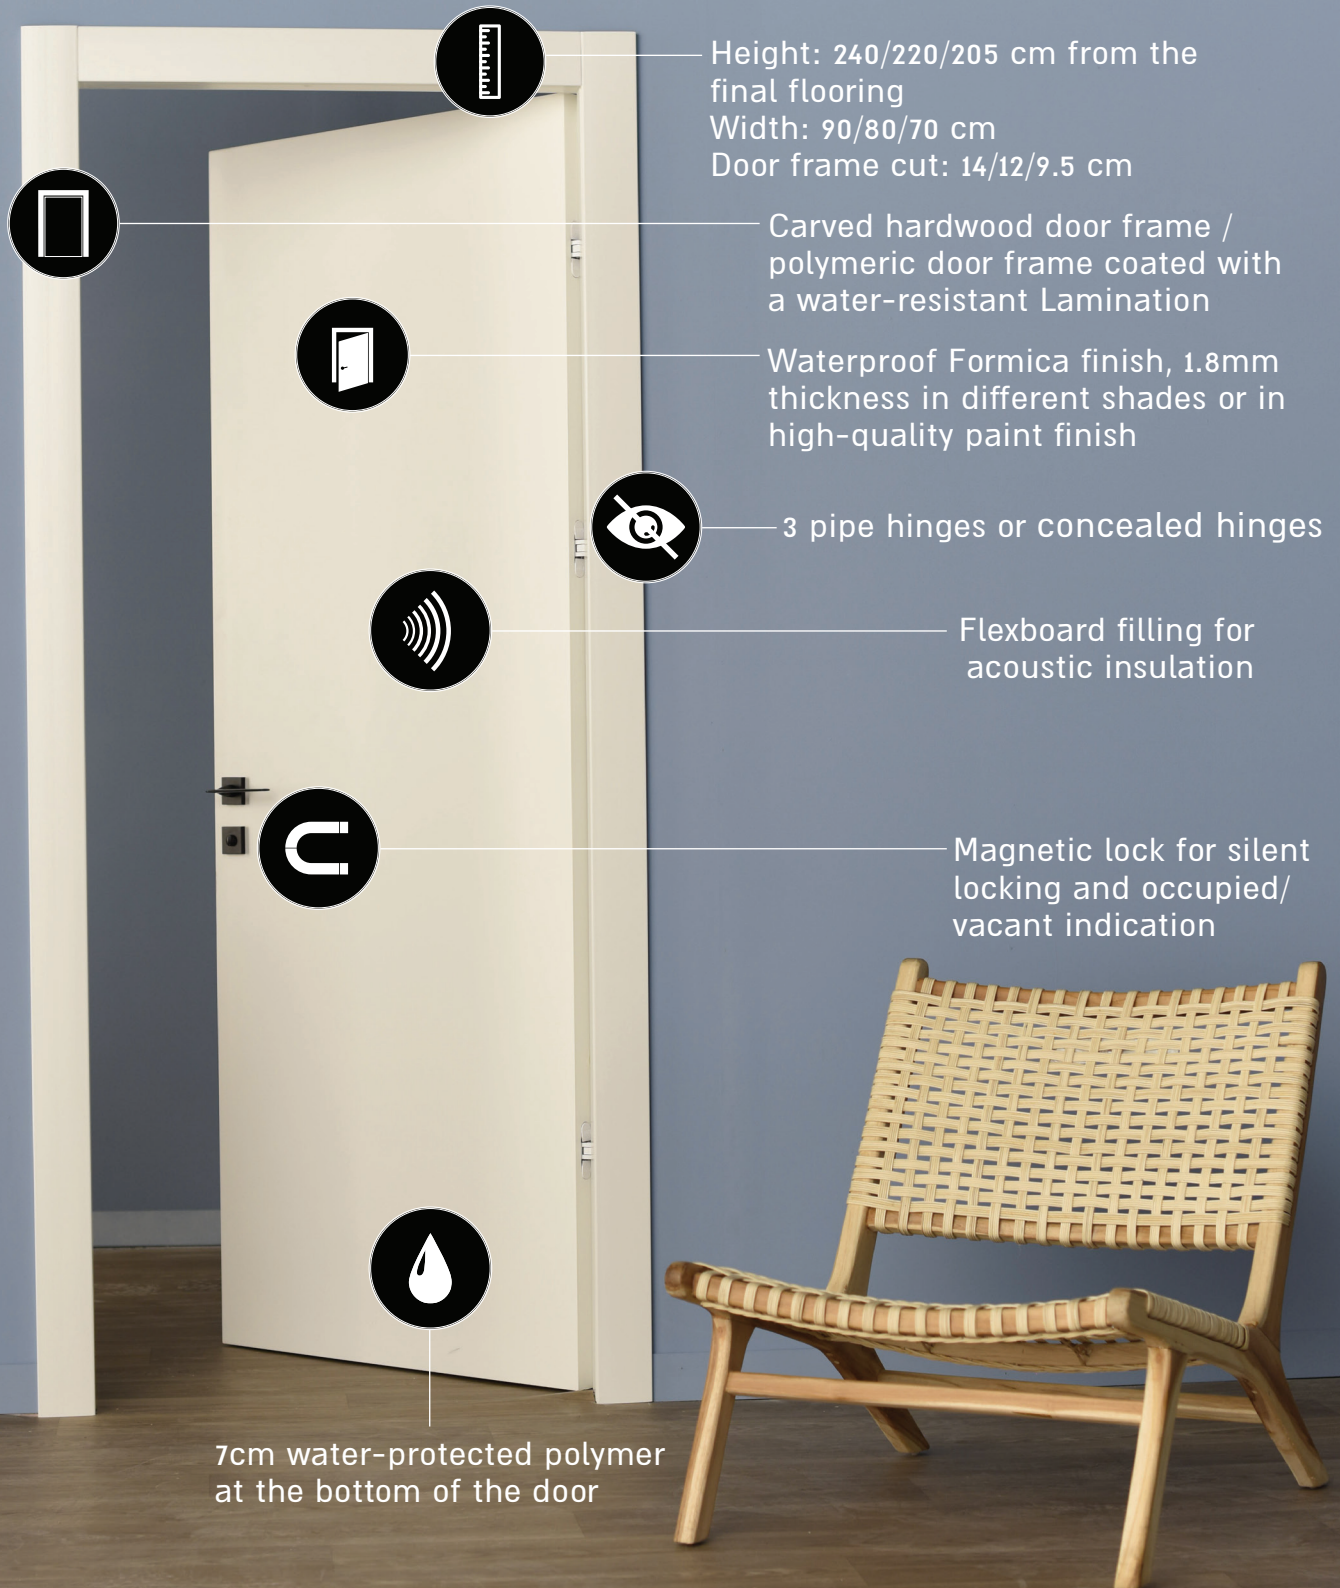

The door is coated with 1.8 mm water-resistant Formica in different shades or in a high-quality color painted finish. The frame made of carved hardwood or WPC coated with a water-resistant Laminate in a door matching shade and water-proof architraves made of WPC. A large selection of glazing, grooving and decorations to match the house style and character.

# Sliding solutions

## Sliding doors

Sliding door is a good fit for a small space. The sliding door slides on hidden rails beneath the frame - the door frame is located on the wall on the inner or outer side of the door.

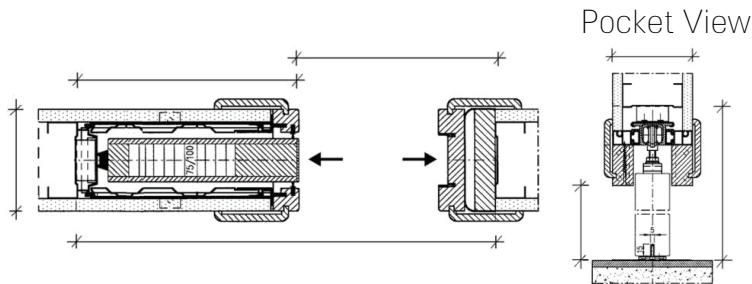

## Barn Style Sliding Doors

Sliding door built on a wall with a black shade barn sliding track + shock absorber. The doors come with paint finish in a variety of designs. The door is not optimal for sound or light insulation.

## Pocket sliding doors

- Open pocket for a wall thickness of 10cm.
- Extended architraves up to 14cm wall thickness.
- Installation of the pocket on a finished floor only.
- Pocket cut can be ordered in different heights for an additional fee.

Architecture: Raz Melamed, Photography: Amit Giron

POCKET SLIDING DOORS SPECIFICATION

POCKET	CLEAR OPENING WIDTH	WALL OPENING WIDTH	CLEAR OPENING HEIGHT	WALL OPENING HEIGHT
70	70	210	152	200
